<b>130                      Kinkora Branch Bridges</b>	<b>98346</b>	<b>1351</b>

Route 130 northbound and southbound over Kinkora Branch, removal

The existing structures will be removed while constructing a new roadway on fill. The roadway typical section will consist of two 12-foot lanes, a 10-foot outside shoulder, and 3-foot inside shoulder in each direction of travel. In addition, a 16-foot grass median will be consistent throughout the limits of the project. A culvert will be constructed under the roadway to maintain a conveyance for the passage of wildlife under Route 130.

Furthermore, the substandard vertical curve in the immediate vicinity of the structures will be lowered to conform with NJDOT standards. The horizontal alignment is to be modified in order to remove the reversing curves existing within the project limits.

The northbound and southbound structures over the abandoned railroad will be removed. The above typical section would, therefore, be constructed on fill. Field evidence and contacts with local officials have indicated the existing conveyance under the structures is utilized by wildlife; therefore, in order to maintain a safe and adequately sized opening for wildlife, a 15-foot by 15-foot arch culvert will be constructed under the roadway improvements.

The rehabilitation will be limited to patching the spalled areas and epoxy injection or pressure grouting of cracks in the existing culvert walls. There are no existing sidewalks within the project limits. The County of Middlesex has indicated they have no plans for bicycle facilities within the project vicinity. The work will not include permanent modifications to the existing roadway and/or the existing status of pedestrian/bicycle compatibility within or adjacent to the project area.

In order for trucks leaving these warehouses to reach the NJ Turnpike and I-295, they must make a "U" turn at Neck Road, or continue down Route 130 to Jacksonville Road where they can reverse direction legally. This project will provide for drainage improvements along Route 130 and Westfield Avenue. Flooding occurs approximately three to five times a year along Pochack Creek, often resulting in the closure of Route 130. Drainage basins will be constructed along Pochack Creek, upstream and downstream of Route 130. The project begins at Walnut Avenue and continues downstream to Route 90. A culvert will be constructed to allow excess stormwater to bypass an industrial park, Route 130, and an adjoining cemetery. The existing creek flows through the Crescent Burial Park and causes extensive flooding; a basin within the cemetery will reduce the flooding in the cemetery. No disturbance of graves is anticipated.
